

heat treat oven, heat treating ovens

Model: **APEX-JCX574**

Standard: **JB/T5520-91**

Introduce: Blast the model type of intelligent PID control digital electric oven, widely used in industrial and agricultural production, scientific research, hea...

Detailed product information

APEX-JCX574 Digital Stainless Steel Heat Treat Oven Liner Oven

First, heat treat oven, heat treating ovens use

Drying Oven is commonly used [food lab equipment](#). Blast the model type of intelligent PID control digital electric oven, widely used in industrial and agricultural production, scientific research, health care, pharmaceutical, biotechnology laboratories and other units on the baking test dry, heat treatment, storage and heating, but not volatile, flammable and other items in order to avoid

Second, the heat treat oven, heat treating ovens principle and structure

Drying Oven is commonly used [food lab equipment](#). On the left side of the studio is equipped with heat pipe products, while the left side of the device is equipped with a blast, constant temperature control device to control the temperature and height, while working through the heat pipe heat cycle and then by blowing device flow, to ensure temperature uniformity, surrounded by circular design, adjustable shelves and down the pitch, built temperature probe. The bottom is a real seal, to prevent short circuits and leakage to avoid baked products such as the risk of falling when caused by impurities and moisture. (Size can be custom-made according to customer requirements)

Third, the heat treat oven, heat treating ovens structural characteristics

Drying Oven is commonly used [food lab equipment](#). Liner into a stainless steel and cold rolled sheet material are two kinds of intelligent digital display temperature controller and LCD display. Corners semicircular is easy to clean, reasonable duct so that the temperature is more uniform. Has a large viewing angle observation window, timing and over-temperature alarm function. With high temperature silicone for sealing the door, high temperature heat pipe for heating elements, to ensure the safety and longer life. Exquisite appearance, high-end, is the product selection enterprises, units and individuals gifted on.

Fourth, the heat treat oven, heat treating ovens technical parameters

Liner Size (D * W * H) mm: 260 * 280 * 280

Dimensions (D * W * H) mm: 385 * 580 * 500

Voltage: 220V

Power: 0.6KW

Thermostat: intelligent digital display temperature controller

Temperature range: room temperature: +5°C--250°C
